                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
              The invention relates to novel isolated nucleic acids encoding diacylglycerol acyltransferases (diacylglycerol O-acyltransferases, DGAT, EC 2.3.1.20) and phospholipid:diacylglycerol acyltransferases (PDAT, EC 2.3.1.158) and the encoded polypeptides. The nucleic acids and methods of the invention may be useful for increasing triacylglycerol (TAG) content in transformed host cells, especially in oleaginous yeasts. The triacylglycerol produced preferably comprises long-chain omega-3/omega-6 polyunasturated fatty acids (PUFAs). The methods allow production of pUFAs with improved nutritional qualities which may be utilized as dietary supplements, particularly for infant formulas, patients undergoing intravenous feeding or for preventing or treating malnutrition, inflammation or high cholesterol. The purified PUFAs may also be incorporated into cooking oils, fate, margarines or other food received.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADW20631;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cannot be synthesized de novo in mammals and must be supplied as part of the diet or derived from linoleic acid or alpha-linolenic acid. There are a variety of commercial sources of PUFAs from natural sources. However, there are disadvantages associated with these methods of production ego heterogeneous oil compositions, pollution, availability fluctuation due to the weather and expense. The current sequence is that of the Yarrowia lipolytica phospholipid:diacylglycerol acyltransferase (PDAT) DNA of the

CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated amino acids. Also described: (1) a CC nucleotide sequence molecule (II) comprising at least one promoter region CC which functions in a host, where the promoter region is operably linked CC to at least one (I), which is operably linked to at least one non-CC translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, CC comprising providing the above host cell and a growth medium preparing a host cell culture, culturing the host cell culture and harvesting the cot cell culture and recovering the improved active membrane independent CC (4), where the polypeptide at least is an improved active membrane independent conditionally the above polypeptide; (6) an oligonucleotide specifically hybridiaing to (I) under stringent conditions; and (7) a kit comprising the above polypeptide and a stabiliser. The nucleic acid comprising the above polypeptide are useful in producing structured condifying lipids present in animal and plant raw material. The present conditions is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original accidence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw material.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            29-MAY-2002; 2002US-0383889P

(I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one and/or substituted as compared to the original acyltransferase cc polypeptide in which at least one cc polypeptide, where the encoded active membrane independent cc acyltransferase polypeptide can produce fatty acid esters and/or fatty cc acid thioseters such as triacylglycerols, diacylglycerols, acid thioseters such as triacylglycerols, diacylglycerols, acid thioseters such as triacylglycerols, diacylglycerols, acylated carbohydrates and acylated amino acids. Also described: (I) a mucleotide sequence molecule (II) comprising at least one promoter region which functions in a host, where the promoter region is operably linked to at least one (I), which is operably linked to at least one non-cc translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an cimproved active membrane independent acyltransferase polypeptide, (5) a polypeptide obtained by the method in comprising the above host cell and a growth medium preparing a host cell culture, culturing the host cell and a growth medium preparing a cimproved active membrane independent colling the obtained by the method in classing to (I) under stringent conditions; and (7) a kit comprising the above polypeptide; (6) an oligonucleotide comprising the above polypeptide; (6) an oligonucleotide acid molecule (I) and the polypeptide are useful in producing structured condifying lipids present in animal and plant raw material. The present of condifying lipids present in animal and plant raw material.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S

                                                                                                                                                                                                                                                                                           The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence encodes yeast (Saccharomyces cerevisiae) PDAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Phospholipid:diacylglycerol acyltransferase enzymes in the biosynthetic pathway for triacylglycerol production and DNAs encoding them, useful for producing triacylglycerol, or for transforming any cell or organism to increase oil content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-APR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 12
The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism. The present sequence represents the yeast (Saccharomyces cerevisiae) PDAT ORF (open reading frame) nucleotide
                                                                                                                                                          Phospholipid:diacylglycerol acyltransferase enzymes in the biosynthetic pathway for triacylglycerol production and DNAs encoding them, useful for producing triacylglycerol, or for transforming any cell or organism to increase oil content.

CC (LROI) is described in an invention relating to several novel
CC (LROI) is described in an invention relating to several novel
CC (polynucleotides encoding the plant sterol acyltransferases LCAT
CC (lecithin:cholesterol acyltransferase-like; AASO01081-AASO1104, AASO1341)
CC and ACAT (acyl CoA:cholesterol acyltransferase-like; AASO1311-AASO1319).
CC and ACAT like cDNA sequence (AASO1105) is also described. The
CC polypucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT
CC polypetides. They can also be used in a recombinant construct to
CC construct is used to increase or decrease the sterol content of the host
CC construct is used to increase or decrease the sterol content of the host
CC cell or plant. It can be used to alter oil production of the cell or
CC plant, preferably by increasing it. The oil of the plant or the plant
CC supplements, or in pharmaceutical compositions for lowering cholesterol.
CC The oil can be used in foods e.g. margarine, butter, cooking oil, and
CC dressings e.g. salad dressings, mayonnaise, cheese, processed meat,
CC cookies, snack bars, confections, chocolates, and beverages. The
CC alteration in sterol content and/or composition can also provide a plant
CC with tolerance to stress and insect damage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid encoding plant lecithin:cholesterol acyltransferase acyltransferase-like or acyl (coenzyme A) CoA:cholesterol acyltransferase like polypeptides, for modifying the sterol content and oil production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 5; Page 116-117; 127pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        specifically hybridising to (I) under stringent conditions; and (7) a loomprising the above polypeptide and a stabiliser. The nucleic acid molecule (I) and the polypeptide are useful in producing structured lipids or fat-soluble molecules, in removing undestrable fat or in modifying lipids present in animal and plant raw material. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1986 BP; 615 A; 361 C; 478 G; 532 T; 0 U; 0 Other;

30-SEP-2003;
                                                                                                                                                                                                                                                                                                   homologues are useful as markers for selection of plants or plant cells with increased tolerance to environmental stress, or for detection of stress in plants or plant cells. The nucleic acids are useful for producing transformed plants with altered metabolic activity resulting increased tolerance and/or resistance to an environmental stress (drought, heat, cold and salt) as compared to a corresponding nontransformed will-type plant cell. The present sequence is a yeast gene encoding an SRP of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2004-766883/75.
